"Role of Nova-1 in regulating alpha2N, a novel glycine receptor splice variant, in developing spinal cord neurons.";

J. Neurobiol. 52:156-165(2002).

J. FUNCTION: Functions to regulate alternative splicing in neurons binding pre-mRNA in a sequence-specific manner to activate exor inclusion. It binds specifically to the sequence UCAUY (By similarity). Acts to regulate a novel glycine receptor alpha-2 chain splice variant (alpha-2N) in developing spinal cord.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                  Score
